

## A New Tuning Board to Add Buoyancy to Your Plug!

This is a flotation sticker made of highly buoyant, porous material. It works wonderfully in adjusting buoyancy of suspending-type plugs, and in controlling Sinking Minnows' falling speed. It can also change the plug posture in water. Your creativity with this product will open up new potentials for your lures.

- Only 0.06-inch thick, it perfectly fits the curve of your plug
- You can cut it into any shape with scissors, even in the field.
- Super-thin Board can be added in layers.
- Made of water-resistant urethane, it will maintain buoyancy.
- Comes in unsuspecting light gray. You can also color it with permanent markers.

Excellent at adjusting buoyancy for the suspending Shad. When you want to bring suspending lures, such as minnows or Shads, to a halt, trim the Board on the lure with scissors until your specific target is met.
