

Heavy Tungsten Rapidly Delivers It to the Bottom!

Marriage between the slip-through form and super-dense tungsten! Its shape is now even more compact. Super Surinuke quickly reaches the bottom, stretching the worm's productive time, while extending the flying distance and accuracy.

■ Material: Heavy metal, tungsten

Its compact shape reduces water resistance and increases falling speed. The hard material is good at conducting what it touches, helping you sense what is on the bottom.

■ Precision Nylon Line Hole

The thicker line hole has a nylon part added inside to protect the line. You can use thicker lines and PE with confidence. Compatible with worms and sinker stoppers.

■ Design

The Sharp nose shape prevents tangling with trash. You can safely use it even in areas covered with algae. The more compact form shortens the time to reach the bottom even more.

■ Color

The matte brown color completely eliminated the glare distinct to tungsten sinkers. It will help even cunning bass let their guard down. It will help even cunning bass let their guard down.
